

Huwag Lumapit nang Husto!

Iswaluyani

Sawsan Latifa

 The Asia Foundation

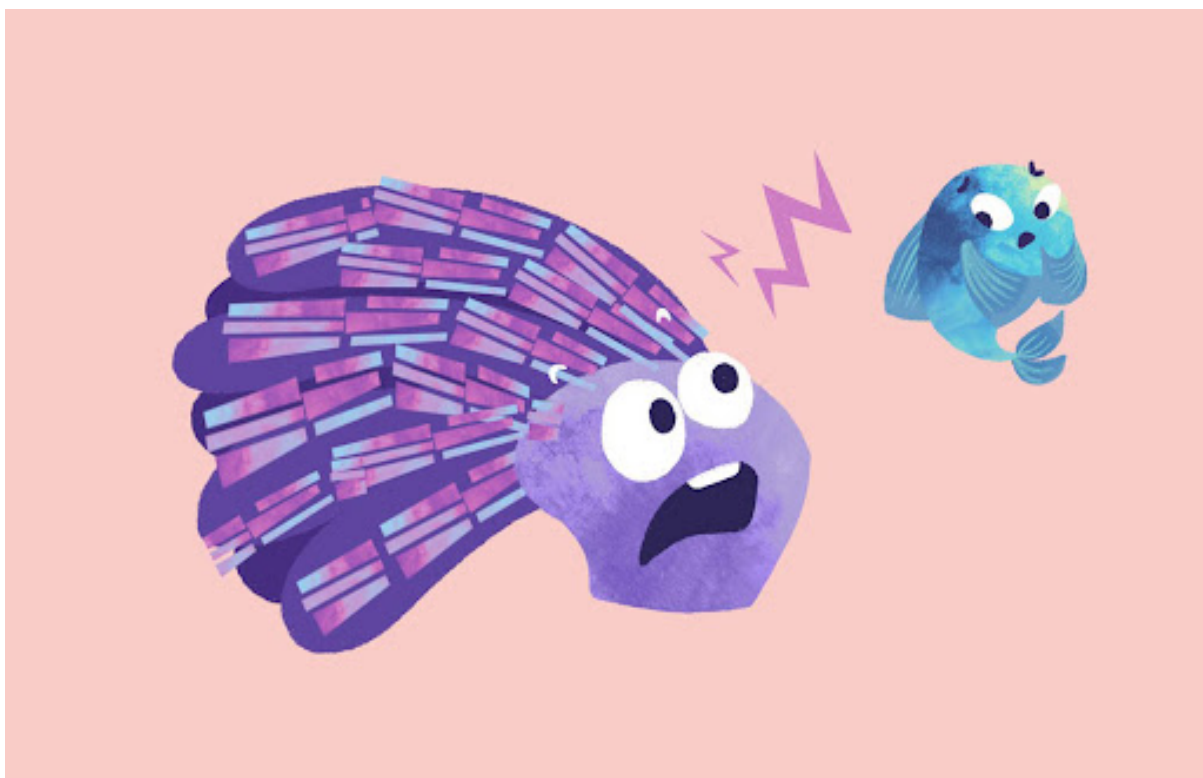

Bumangon si Neo, ramdam ang kaniyang gutom. Kailangan niyang maghanap ng makakain. May mga isdang lumalangoy sa paligid. Hindi pa nakakain si Neo ng kasing laki ng isdang tulad nito.

Papalapit ang isang isda kay Neo. Mahuhuli kaya niya ito?

Hinuli ng kanyang galamay ang isda.

Aray! Natusok ang isda.

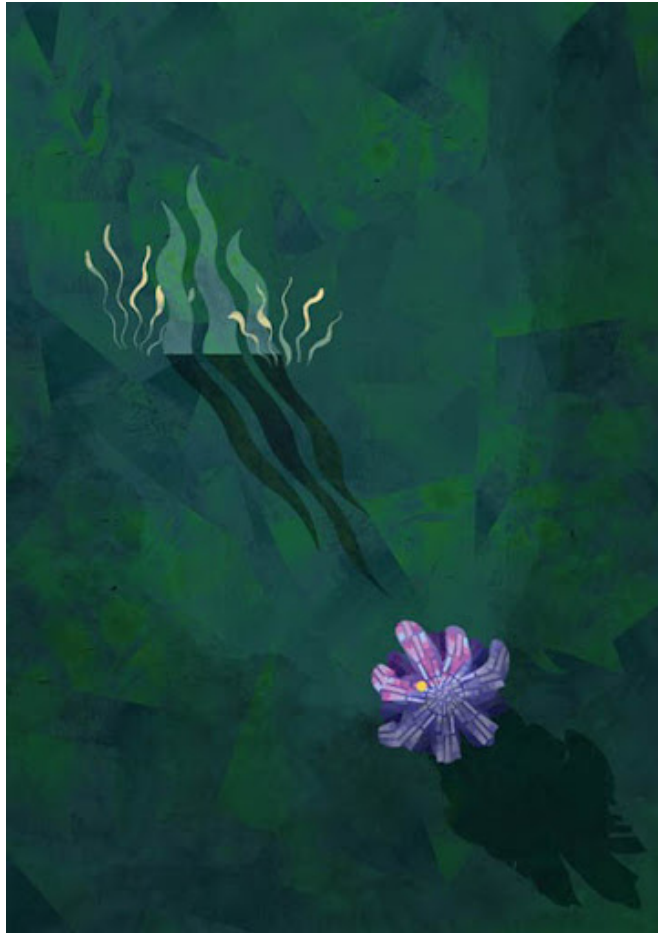

Mukhang nasaktan talaga ang isda. Ito ang unang pagkakataon na malinaw niya itong nakita.

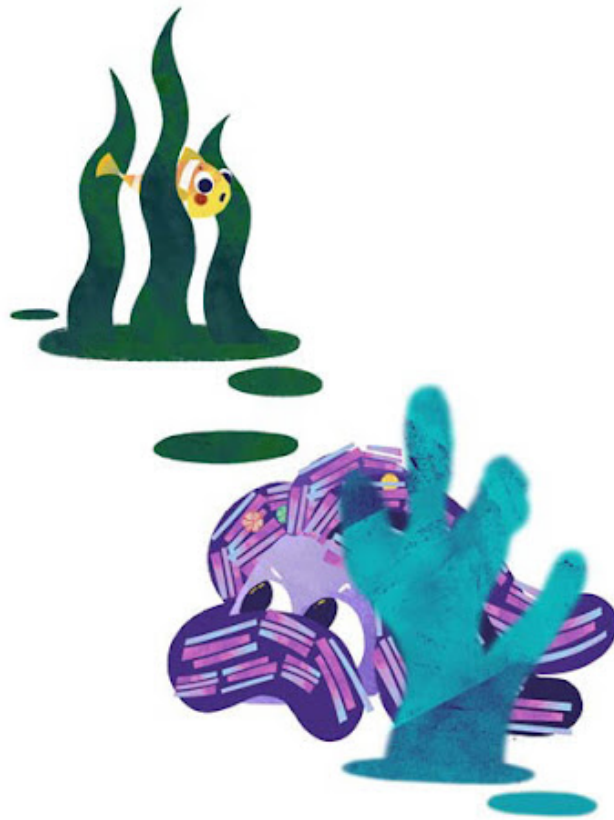

Nalungkot nang sobra si Neo. Naisip niyang mas mabuting kumain na lamang siya ng iba maliban sa isda.

Iniwasan na ni Neo ang ibang mga isda.

Pero isang isda ang lumalapit sa kanya nang husto.

Isang maliit at maganda na may matingkad na mga kulay. Ayaw ni Neo na ito'y masaktan.

Lumayo ka, maliit na isda!

Layo!

Matutusok ka.

Naku, huwag! Alis!

Hay, mabuti naman nawala na ang maliit na isda. Sa wakas, makapag-iisa na si Neo.

Bulaga!

Naku, bumalik ang maliit na isda! At ito'y tumatawa.

<p style="text-align:center">Ngayon mukhang
takot na takot.

<p style="text-align:center">May napakalaking
anino.

<p style="text-align:center">Anong mayron
doon?

Isang malaking mandaragit! Lumangoy nang mabilis ang maliit na isda patungo kay Neo.

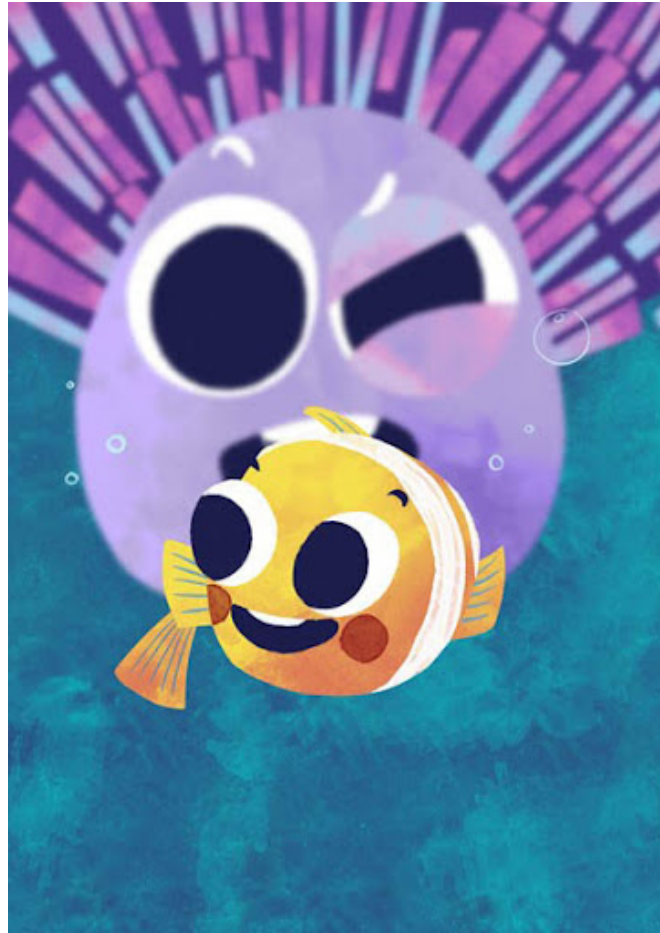

Ay naku! Natakpan ng mga galamay ni Neo ang isda.

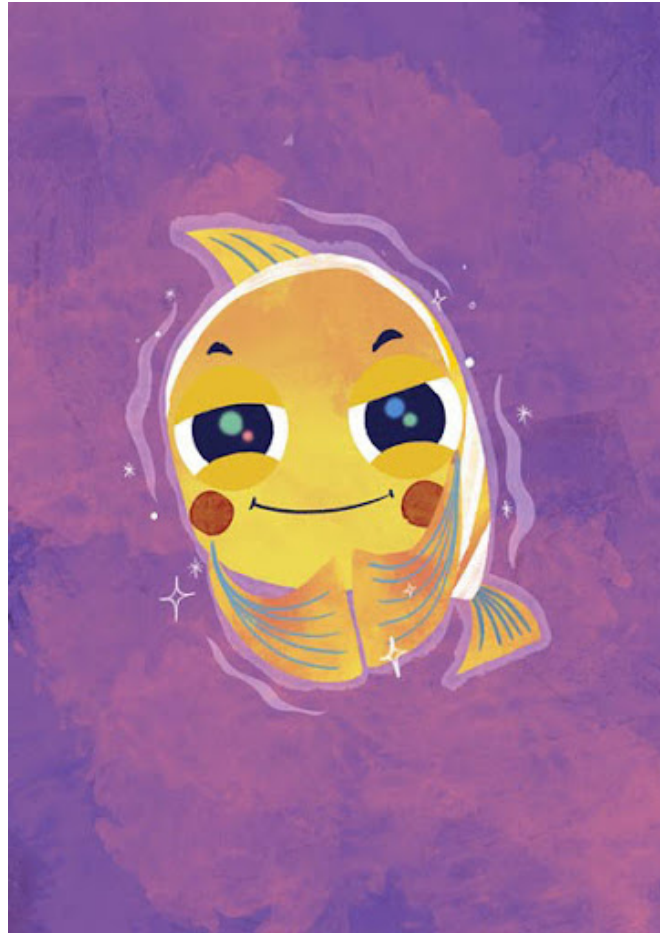

Hindi kayang makita ito ni Neo. Siguradong natusok at nalason na ni Neo ang isda.

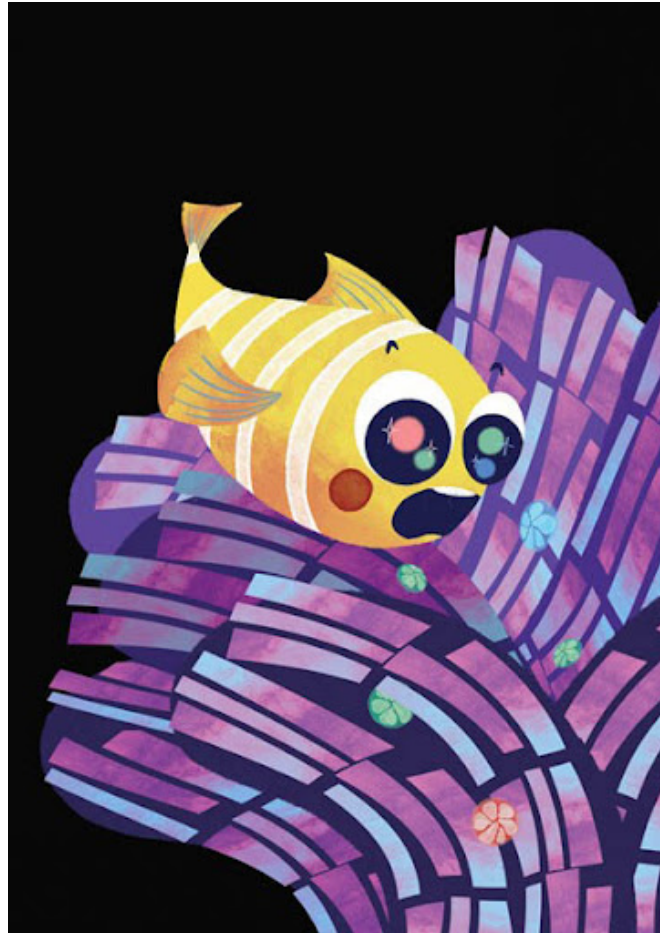

Sandali! May gumagalaw sa pagitan ng mga galamay ni Neo.

Wow, ang maliit na isda! Nasaktan kaya siya?

Tingnan ang kanyang mukha. Mukha naman siyang ayos na ayos.

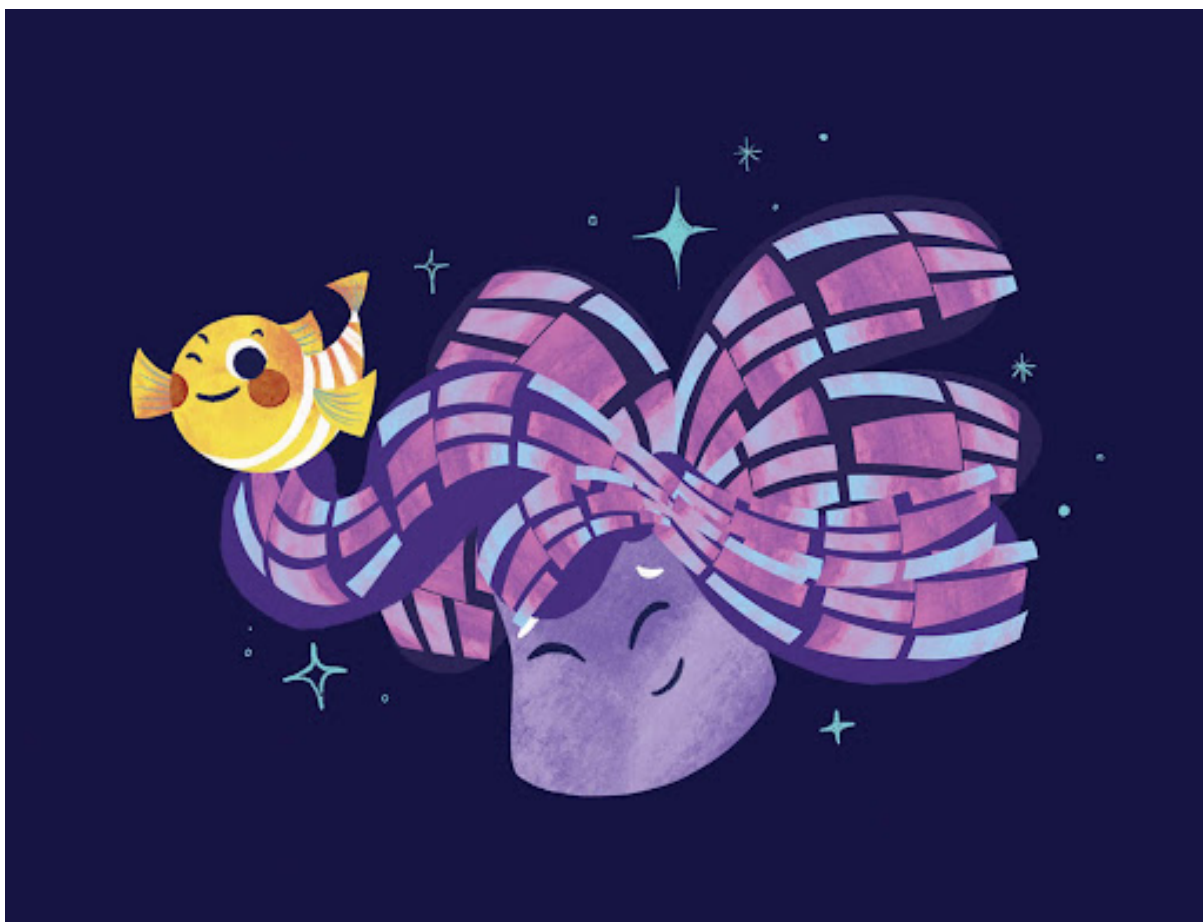

Sandali, ano ang kanyang ginagawa?

O, kinakain ng isda ang lumot sa katawan ni Neo.

Paanong hindi siya nasaktan?

Kitang-kita na hindi nalason ng kamandag
ang isda.
Ang galing! Makakapaglaro na silang
magkasama.

Let's Learn About:

Mutualism Symbiosis

Neo, in this story, is a sea anemone. The small bright colored fish which approaches Neo is a clown fish. These two sea creatures have a special relationship with one another.

Sea anemones have poisonous tentacles that clown fishes are immune to because of a certain slime on their body. Because the sea anemone's tentacles deter predators from

approaching, clown fishes often hide there to stay protected.

Meanwhile, clown fishes help sea anemones by eating the parasitic algae that grow on their bodies.

This relationship is called mutualism symbiosis because of the mutual benefits on both sides.
